

Chapter 9 — Crowdsourcing use cases

When human judgment must scale beyond a small expert team, crowdsourcing distributes work to a large online community

Learning objectives

- By the end of this part

What crowdsourcing is

- Crowdsourcing obtains input
- It draws on collective intelligence and diverse skills for problems that are too complex
- The approach can lower cost while also tapping creativity, not only routine labor

Types of crowdsourcing tasks

- Common types include crowd voting on ideas or designs
- Dataset projects most often emphasize crowd labor and related labeling workflows

Labeling, research, and fraud review

- Machine learning teams use crowdsourcing to gather labeled images and text quickly
- Market research can sample broad demographics through surveys on the same platforms
- Frequency signals

Example 9.8 — Crowdsourcing Fraud-Pattern Review

- Example 9.8 — hands-on module
- Locations, and frequency
- Applied in near real time
- Explore the chapter example module
- View files: ``modules/chapter9/example8/``

Example 9.9 — Netflix Prize Crowdsourced Innovation

- Example 9.9 — hands-on module
- Example 9.9 recalls the Netflix Prize
- Organizations use contests to crowdsource innovation when many external teams can explore
- Explore the chapter example module
- View files: ``modules/chapter9/example9/``

Example 9.10 — Microtask Image Tagging on Crowd Platforms

- Example 9.10 — hands-on module
- Distributed to many workers
- Thousands of items can be annotated in hours rather than weeks
- Explore the chapter example module
- View files: ``modules/chapter9/example10/``

Takeaways

- Crowdsourcing scales human judgment through online communities and multiple task types
- Dataset work often centers on labeling and microtasking
- Fraud review, open prizes
